

1 47149/JDC/G400

ABSTRACT OF THE DISCLOSURE

5 A delocalized apparatus for monitoring a biological
property in an individual or group of individuals is provided,
and includes one or more user terminals having an input port
and a user interface, a transducer associated with each user
terminal and coupled to the user terminal input port, a
10 controller, and a bidirectional link from the transducer to
the controller. A single controller can be used to process
data received from multiple transducers, allowing a biological
property in a group of individuals to be monitored.
